

Secondary Driving Control

0161 776 1594 / 01925 640730

office@basnw.co.uk www.basnw.co.uk

- The BAS 10 Way Secondary Driving Control allows a driver to control functions such as the indicator and horn from a wireless control fitted to the steering wheel.
- If you have limited movement in your upper body, this control will bring everything to your fingertips.

- The design allows the driver to use the adaptation both to control the secondary functions and as a steering wheel aid.

- The sleek and stylish design allows the adaptation to blend seamlessly with the vehicle's original interior.

- The adaptation controls the lights, wipers, horn and indicators. It is also available with auto-cancelling indicators.

Fitting service available throughout the UK

- Developed in collaboration with Occupational Therapists this adaptation is extremely easy to use and can be fitted on either the right or left hand side of the steering wheel.
- Note - the original controls are still active with the use of this adaptation.
