- The BAS Person Hoists are ideal if you have limited movement and will enable the safe transfer of a user from their wheelchair/scooter into a vehicle. A sturdy sling placed between the passenger and the wheelchair is hooked on to the hoist and this can be removed from the support bracket and stored in the boot when not in use.

- There are two versions available; a Front Seated Person Hoist and a Rear Seated Person Hoist. The products work in exactly the same way, only one transfers a user into a front seat of a vehicle and the other into a rear seat of a vehicle.

• Both the Front and Rear Seated Person Hoist have a lifting capacity of 120kg.

- A remote control comes as standard with the Front Seated Person Hoist and is available as an optional extra with the Rear Seated Person Hoist.

Fitting service available throughout the UK

- Both can be easily installed into a wide range of vehicles and have a sleek and neat finish.
