

Electric Hatch Opener

The BAS Electric Hatch Opener opens and closes your boot by simply pressing a button.

This smart aftermarket system provides additional security and value to your vehicle. Unlike other kits available, this ultra-reliable system does not reduce boot storage space.

All hatch openers come with a dash mounted switch and a rear mounted boot switch, regardless of make/model of vehicle.

An under bumper sensor and soft closure system are optional on selected vehicles.

On most models you will be able to use the vehicle's key fob and if this is not possible, then an optional remote control can be supplied.

Additional features include anti crush protection and adjustable maximum opening height, should you keep the vehicle in a garage.
