

DOUBLE INERTIA OCCUPANT BELT[®]

AL600 SERIES

A Complete Sure-Lok Kit for
**Securing Occupants
and Their Wheelchairs**
in Community Transport Vehicles
throughout the World.

DOUBLE INERTIA OCCUPANT BELT®

AL600 SERIES

The Double Inertia occupant belt is comprised of dual occupant retractors and a separate vehicle anchorage point for securing wheelchairs in both small and large cutaway vans. It is frequently used in Community Transport vehicles across Europe and other areas throughout the world.

Features & Benefits:

- **Heavy Duty Cover:** durable metal cover for heavy duty use. Offers enhanced protection against hard everyday use.
- **Dual Vehicle Sensitive Retractors:** retractors offer both inertia locking (a fast, hard pull will lock the retractor) and vehicle sensitive locking (retractor locks if the vehicle is on a slope of 15 degrees or more) for additional passenger safety.
- **Unique Internal Floating Guide:** keeps debris away from the retractor mechanisms and prevents twisting of the belts. Provides greater comfort in securing wheelchair passengers.
- **Track Anchorage:** mounts directly onto a Track fitting (PLI), while maintaining a low-profile height.
- **PLI Fitting:** Positive Locking Indicator on fitting serves as a visual locked indicator to ensure the fitting is locked into the vehicle anchorage.
- Heavy duty performance in a compact, low-profile retractor.
- Supplied with a 3 point shoulder belt location as standard (Optional use)
- Colour coded webbing to differentiate shoulder and lap belts to help those securing passengers to visually verify the proper use of securement equipment.
